

Come and help us put back the pieces on National Tree Day

The best way to restore and regenerate the land is to **put back the pieces** that make up healthy natural systems. Native plants evolved to suit the local climate and soils. Re-vegetation with native plants brings back often-rare plant communities, creates wildlife habitat and helps restore our natural heritage.

Planting native trees, shrubs and grasses and removing invasive weeds has many benefits such as ... **reconnecting fragmented natural areas ... restoring a vital link in the water cycle ... reducing wind and water erosion ... improving air quality ... rebuilding soils ... reducing temperature extremes ... creating refuges for wildlife and urbanised humans.**

Planting to create wildlife habitat

So bring your family and friends and come and help us plant in the Sanctuary on Sunday 27th July from 9.30 am to 12 noon. A delicious morning tea will reward your efforts. A barbecue will also be provided at 12.30pm.

RSVP please dogrockssanctuary@bigpond.com and bring appropriate clothing and tools.
